Financial accounting is the area of accounting that focuses on providing external users with useful information. In other words, financial accounting is a way of reporting business activity and financial information to investors, creditors, and other people outside the business organization. Companies issue financial statements on a routine schedule. The statements are considered external because they are given to people outside of the company, with the primary recipients being owners/stockholders, as well as certain lenders. If a corporation's stock is publicly traded, however, its financial statements (and other financial reportings) tend to be widely circulated, and information will likely reach secondary recipients such as competitors, customers, employees, labor organizations, and investment analysts.

What Does Financial Accounting Mean? Investors and creditors are often called external users because they are people outside of the organization who use the company financial information to make decisions. The most common form of financial information issued to external users by companies is a general purpose set of financial statements. Example These financial statements, along with financial accounting standards in general, must be held to strict rules, so the financial statements will be useful and of high quality. That is why GAAP governs the principles and standards of financial accounting. GAAP requires

that accounting information be relevant, reliable, and consistent among other things. This insures that external users will be able to have quality information to base their financial decisions on. All external users have different needs when it comes to financial information. For instance, a lender is primarily concerned with a company's cash flow and ability to repay loans with interest. An investor, on the other hand, is more concerned with company profit performance and longevity. The overall purpose of financial accounting is to create information or financial statements that can be used by all external users to base their financial decisions on whether or not these decisions involve lending money or investing money. Accounting for internal users is typically considered managerial accounting and is subject to less stringent standards and requirements. The financial statements used in financial reports describe the five major financial data classifications: income, expenditures, assets, liabilities, and equity. Revenues and expenses are listed on the income statement. They will involve anything from research and development to the payroll. Financial accounting results in net profit being calculated at the bottom of the income statement. The balance sheet reports on the assets, liabilities, and equity accounts. The balance sheet uses financial statements to disclose control of the potential economic benefits of the company. The main distinction between financial and managerial accounting is that financial accounting is intended to provide information to parties outside the organisation. In contrast, managerial accounting information is designed to help managers make decisions within the organisation. For governmental bodies and financial institutions, preparation of financial statements using accounting standards is of the highest importance. Praise for Directory of Global Professional Accounting and Business Certifications "In a globalized world, employers are confronted by a bewildering variety of professional qualifications, some valid, some less weighty and some spurious and fraudulent. This

excellent compilation enables the reader to touch base with such organizations and explore their true credentials through access to their whereabouts including Web sites. It is additionally pleasing that updates will be provided via the publisher's own Web site." -- Professor Dr. Gerald Vinten Deputy Principal, Thames Graduate School, Ilford, London Past president, chairman and committee chair, and member of several professional bodies (including the Institute of Internal Auditors, Royal Society of Health, CIPFA, and AAT) "I've often wondered what the 'alphabet soup' after some colleagues' names means and how impressed I really should be. Now I can find out!...This directory will be a valuable reference guide for human resource professionals and anyone else who wants to know what those letters mean and how seriously to take them." --James Roth, PhD, CIA, CCSA President, AuditTrends "The Directory of Global Professional Accounting and Business Certifications by Lal Balkaran is an indispensable reference source for anyone involved in the international accounting, auditing, and business professions. It is global, comprehensive, accurate, and easy to use. It is like having a personal contact book to all the world's professional organizations." --Belverd E. "The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Data Analytics Data Analytics in the Real World Real-world examples that illustrate engaging situations in companies are provided throughout the text. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. FINANCIAL ACCOUNTING, 9th Edition, uses the preparation of financial statements as the framework for understanding what accounting is all about. Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic, legal, political and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. This book was written to help fill that gap. This book is the second in a series to examine accounting and financial system reform in transition economies. The first book used Russia as a case study. The present volume in the series examines some additional aspects of the reform in Russia and also looks at the accounting and financial system reform efforts that are being made in Ukraine, Bosnia & Herzegovina, Armenia and five Central Asian republics. While becoming a financial manager may seem to be a cumbersome undertaking, it is more viable than ever before. In order to attain a position at a behemoth of a corporation as a financial manager, it would behoove you to be knowledgeable in the domains of "finance, accounting, economics, or business administration" ("Financial Managers," n.d). While having earned a bachelor's degree or master's degree is not a prerequisite to becoming a financial manager, it will help you land job interviews for the financial manager position you desire. Moreover, "employers now seek candidates with a master's degree, preferably in business administration, finance, accounting, or economics. These academic programs can help students develop analytical skills and learn financial analysis methods and software" ("Financial Managers," n.d). By having earned a bachelor's degree in finance and master's degree in finance, you will be more apt to become a financial manager since you have already demonstrated to a prospective employer that you are competent in the domain of finance. Beyond the aforementioned, it would also behoove you to be pursuant of professional certifications to increase the likelihood of you becoming a financial manager at a major company. Having professional certifications demonstrates to an employer that you are knowledgeable and competent expert of a niche field. "The CFA Institute confers the Chartered Financial Analyst (CFA) certification to investment professionals who have at least a bachelor's degree, 4 years of work experience, and pass three exams. The Association for Financial Professionals confers the Certified Treasury Professional credential to those who pass an examination and have a minimum of 2 years of relevant experience. Certified public accountants (CPA's) are licensed by their state's board of accountancy and must pass an exam

administered by the American Institute of Certified Public Accountants (AICPA)" ("Financial Managers," n.d). Obtaining professional certifications that are cumbersome to obtain will not only render you a more versatile and credentialed job candidate, but can also have tremendous bearing on allowing you to land job interviews for the financial manager position. Beyond earning finance degrees and professional certifications, you should also have amassed considerable work experience sustaining a financial occupation for at least 5 years before applying for the financial manager position. Financial managers typically have ample years of past work experience as "loan officers, accountants, securities sales agents, or financial analysts. In some cases, companies will provide formal management training programs to help prepare highly motivated and skilled financial workers to become financial managers" ("Financial Managers," n.d). Having substantial work experience and meritorious achievements from having worked a multitude of financial occupations over the years can preponderantly outweigh the bearing that lofty educational credentials have on helping you attain a position as a financial manager.
