An Up-to-Date Compendium on the Physics and Mathematics of Polarization Phenomena Now thoroughly revised, Polarized Light and the Mueller Matrix Approach cohesively integrates basic concepts of polarization phenomena from the dual viewpoints of the states of polarization of electromagnetic waves and the transformations of these states by the action of material media. Through selected examples, it also illustrates actual and potential applications in materials science, biology, and optics technology. The book begins with the basic concepts related to two- and three-dimensional polarization states. It next describes the nondepolarizing linear transformations of the states of polarization through the Jones and Mueller-Jones approaches. The authors then discuss the forms and properties of the Jones and Mueller matrices associated with different types of nondepolarizing media, address the foundations of the Mueller matrix, and delve more deeply into the analysis of the physical parameters associated with Mueller matrices. The authors proceed with introducing the arbitrary decomposition and other useful parallel decompositions, and compare the powerful serial decompositions of depolarizing Mueller matrices. They also analyze the general formalism and specific algebraic quantities and notions related to the concept of differential Mueller matrix. Useful approaches that provide a geometric point of view on the polarization effects exhibited by different types of media are also comprehensively described. The book concludes with a new chapter devoted to the main procedures for filtering measured Mueller matrices. Suitable for advanced graduates and more seasoned professionals, this book covers the main aspects of polarized radiation and polarization effects of material media. It expertly combines physical and mathematical concepts with important approaches for representing media through equivalent systems composed of simple components. 21st Century Science Grant. The patrol vehicles used by Special Operations Forces in Afghanistan and Iraq vary quite dramatically between the theatres as well as amongst the Coalition members, and have been developed and upgraded to meet the demands of the deployment. Covering all the major Coalition nations, Leigh Neville continues his look at the elite forces deployed in Operations Enduring Freedom and Iraqi Freedom, with this analysis of their vehicles. Tracing the evolution of the vehicle types, from their historical precedents, through their designs to their operational developments, he discusses their advantages and disadvantages, along with their tactical employment. From the mine-protected vehicles used to counter the IED threat in Iraq, the use of Strykers as armoured raiding platforms by the US Rangers, to the civilian vehicles adapted for military service by both Coalition troops and Private Military Contractors in the regions, this book uses rare in-theatre photographs and colour artwork to show the variety and inventiveness of the patrol vehicles being used in combat today. Copolymerization is a very widely used industrial process, in fact the dominant process in macromolecular chemistry. With the advent of widespread computing power, this book will be very useful both to academic researchers in copolymerization and to researchers in industry concerned with the synthesis of polymers such as plastics, rubbers, chemical fibers, and paints. A disk with 15 computer programs accompanies the book. The full story of the legendary US infantry division and their remarkable service in WWII, told through interviews with surviving servicemen. The 30th Infantry Division earned more Medals of Honor than any other American division in World War I. In World War II, it spent more consecutive days in combat than almost any other outfit. Recruited mainly from the Carolinas, Georgia, and Tennessee, they were some of the hardest-fighting soldiers in Europe. They possessed an intrinsic zeal to engage the enemy that often left their adversaries in awe. Their US Army nickname was the "Old Hickory" Division. But after encountering them on the battlefield, the Germans called them "Roosevelt's SS." The Fighting 30th Division chronicles the exploits of this illustrious unit through the eyes of those who were actually there. From Normandy to the Westwall and the Battle of the Bulge, each chapter is meticulously researched with accurate timelines and after-action reports. The last remaining veterans of the 30th to see action firsthand relate their experiences here for the first time, including previously untold accounts from survivors. Before the Civil War, colonization schemes and black laws threatened to deport former slaves born in the United States. Birthright Citizens recovers the story of how African American activists remade national belonging through battles in legislatures, conventions, and courthouses. They faced formidable opposition, most notoriously from the US Supreme Court decision in Dred Scott. Still, Martha S. Jones explains, no single case defined their status. Former slaves studied law, secured allies, and conducted themselves like citizens, establishing their status through local, everyday claims. All along they argued that birth guaranteed their rights. With fresh archival sources and an ambitious reframing of constitutional law-making before the Civil War, Jones shows how the Fourteenth Amendment constitutionalized the birthright principle, and black Americans' aspirations were realized. Birthright Citizens tells how African American activists radically transformed the terms of citizenship for all Americans. The Disciple's Study Bible guides an individual's journey in following Jesus, by featuring study notes focused on discipleship, as well as a reading plan, journaling space and additional articles that equip Christians to disciple others.
