In a village outside Edinburgh, a young boy is the victim of a shocking ordeal while playing by the canal . . . he is attacked by a rat. The village itself is currently in turmoil over a genetically modified crop growing in a nearby field and sinister doubts are being expressed over its supposed government licence. The Sci-Med Inspectorate send Steven Dunbar to investigate. His search for the truth soon gives rise to the horrific suspicion that the rat incident - one of several in the area - might be connected to the GM crop. Is there something in these crops that is somehow affecting the behaviour of the rats? But Steven's questions are beginning to upset some powerful operators: people who are prepared to kill to stop him . . . This book was first published by Simon & Schuster Ltd. (UK) in 2001. It was the second Steven Dunbar adventure to be published in a series that currently extends to ten.. Steven is not only a qualified doctor but also an ex-Special Forces soldier who now works for the Sci-Med Inspectorate, a small unit attached to the Home Office of the UK government. It is their job to investigate possible wrong-doing in the Hi-Tech world of science and medicine. Ken McClure is the internationally bestselling author of over twenty medical thrillers such as *The Lazarus Strain*, *The Gulf Conspiracy*, *White Death* and *Dust to Dust*. His books have been translated into twenty-three languages and he has earned a reputation for the accuracy of his predictions. McClure's work is informed by his background as an award-winning research scientist with the UK's Medical Research Council. When Steven Dunbar is called upon to investigate the bizarre murders of two UK medical scientists at the top of their fields, he finds it difficult to see anything they had in common. On paper, they had never even met. When a French banker in Paris, a Swiss World Health Organisation strategist in Geneva and an Israeli microbiologist in Beer Sheva meet a similar fate, the only link Steven can see is money. At some point in the recent past, all of them have become suddenly and secretly rich and Russian oligarchs - expats living in London - have something to do with that. As Steven's investigation expands on a global scale, the intelligence services of several countries become involved, fearing some world-wide conspiracy. Steven's peace of mind is further challenged when his partner, Tally, a doctor at a London children's hospital, decides to join the fight against the killer Ebola virus in the Democratic Republic of Congo where yet another epidemic of the disease has broken out. She feels that not enough is being done by Western governments to prevent the situation worsening to become an international pandemic. She is to discover that Steven is not the only one coming up against a conspiracy, one that is to put both their lives in danger and threatens to unleash undreamt-of horror on the world. Ex-Special Forces medic Dr Steven Dunbar has left his job with the Sci-Med Inspectorate and now works for a pharmaceutical company. Against his will, he is persuaded to return to Sci-Med when a number of people die in suspicious circumstances, including a former health minister. And then the UK comes under bio-terrorist attack. A disease not seen in the country for a hundred years is let loose on major cities and a group of young Islamic fundamentalists are arrested. But something is not quite right. Steven begins to suspect that there is a dark and ruthless conspiracy at the heart of the outbreak that is much closer to home. Steven Dunbar gets the news that an old friend, Dr Simone Ricard of *Medicins Sans Frontieres*, has died in an accident while attending a scientific meeting in Prague. She and her team have been working to eradicate polio in the border region between Pakistan and Afghanistan and have discovered a possible reason for their failure to do so - fake teams put in by the CIA. She has gone to Prague to publicise this but the meeting organisers won't let her speak - they already know the reason and have accepted the CIA apology. They think it will only make matters worse if wider publicity is sought. 'Provides real chills as a major health conspiracy is uncovered' - *The Big Issue* 'Chilling and believable' - *Big Beat* From *Badsville* The seventh Dr Stephen Dunbar thriller. The Governments of the world know a terrorist biological attack will happen sooner rather than later. Vaccination is the only solution, but designing and producing vaccines has never been harder due to stringent trials, rules and regulations and huge settlements in an increasingly litigious society. There is no such thing as a 'completely safe vaccine' but necessity soon begins to outweigh caution and corners are cut, blind eyes turned and scientists given free rein with the new science of molecular biology. The only outcome can be disaster. Steven Dunbar gets the news that an old friend, Dr Simone Ricard of *Medicins Sans Frontieres*, has died in an accident while attending a scientific meeting in Prague. She and her team have been working to eradicate polio in the border region between Pakistan and Afghanistan and have discovered a possible reason for their failure to do so - fake teams put in by the CIA. She has gone to Prague to publicise this but the meeting organisers won't let her speak - they already know the reason and have accepted the CIA apology. They think it will only make matters worse if wider publicity is sought. The first full-length study of its type highlighting over 400 British literary detectives, many famous through their film and TV adaptations. Using essays to highlight different types of detectives and focusing on some of the more famous such as Sherlock Holmes and Inspector Morse, popular crime fiction writer and former President of Britain's Crime Writers Association, Russell James celebrates the role of the detective in British fiction. Illustrations include original film posters and first edition covers from classic detective fiction. Future books by Russell James in this series will include *Great British Fictional Villains* and *US Fictional Detectives and Villains*. Dieser Buchtitel ist Teil des Digitalisierungsprojekts Springer Book Archives mit Publikationen, die seit den Anfängen des Verlags von 1842 erschienen sind. Der Verlag stellt mit diesem Archiv Quellen für die historische wie auch die disziplingeschichtliche Forschung zur Verfügung, die jeweils im historischen Kontext betrachtet werden müssen. Dieser Titel erschien in der Zeit vor 1945 und wird daher in seiner zeittypischen politisch-ideologischen Ausrichtung vom Verlag nicht beworben. If you're interested in learning about how to write, how to be a writer, or about the writing life in general, what greater resource and pleasure than frank, revealing interviews with some of today's best-selling authors? Len Wanner's acclaimed interview series continues with VOLUME THREE, featuring in-depth interviews with twelve of the leading lights of Scottish crime fiction and with a foreword by William McIlvanney, creator of Jack Laidlaw and the Godfather of tartan noir. -Peter May talks about writing for television, repairing bad dialogue, researching his China thrillers with the help of the Ministry of Propaganda, and receiving international exposure with a book no British publisher wanted to publish. -Charles Cumming talks about the rewards of a degree in literature, refining expository storytelling, researching state secrets at home and abroad, writing the great international spy novel, and being recruited by the SIS. -Campbell Armstrong talks about going abroad to write about home, giving up on teaching creative writing, getting over the paralysis of a bad sentence, going on stake-outs, giving us his memoirs, and getting commissioned to novelise Indiana Jones. -Caro Ramsay talks about teaching herself how to write with her back against the wall, learning how to write crime fiction from agents and editors, teaching herself how to compartmentalise, and learning how to finish a book. -Aline Templeton talks about diving in and out of writing, writing a series of cosy police procedurals based on a subterranean cave system, living in the city yet writing about the countryside, and discovering that a fictional protagonist is a living person. -plus much more from Lin Anderson, Alex Gray, Gillian Galbraith, GJ Moffat, Craig Robertson, Ken McClure, and Frederic Lindsay. General Adult. When a research institute is broken into and vandalized, the police believe that it is animal rights activists taking things a step too far. That is until they discover one of the institutes eminent scientists, Tim Devon, brutally murdered. Dr Steven Dunbar, working for the Sci-Med Inspectorate, an elite government agency, is sent to investigate. Dr. Frank Simmons works in the University of Edinburgh's medical school. One of his PhD students, brilliant loner Gavin, announces his intention to find a cure for cancer and actually makes a major breakthrough. Oddly, no one seems to be interested, and a picture emerges of a cancer research industry caught in a desperate paradox: it can only justify its existence by not curing cancer. Disinterest soon turns to open warfare as Simmons and Gavin's work is sabotaged. A truly compelling story, this fast-paced scientific thriller blends superb dialogue with thought-provoking ideas. 'The most frightening thing is that research scientist McClure makes it utterly believable' - *The Scotsman* Dr Frank Simmons works in the University of Edinburgh's medical school. One of his PhD students, brilliant loner Gavin, announces his intention to find a cure for cancer and actually makes a major breakthrough. Oddly, no one seems to be interested and a picture emerges of a cancer research industry caught in a desperate paradox: it can only justify its existence by not curing cancer. Disinterest soon turns to open warfare as pressure is put on Simmons and Gavin's work is sabotaged. A truly compelling story with superb dialogue and thought-provoking ideas. This book is a celebration of mathematical problem solving at the level of the high school American Invitational Mathematics Examination. There is no other book on the market focused on the AIME. It is intended, in part, as a resource for comprehensive study and practice for the AIME competition for students, teachers, and mentors. After all, serious AIME contenders and competitors should seek a lot of practice in order to succeed. However, this book is also intended for anyone who enjoys solving problems as a recreational pursuit. The AIME contains many problems that have the power to foster enthusiasm for mathematics – the problems are fun, engaging, and addictive. The problems found within these pages can be used by teachers who wish to challenge their students, and they can be used to foster a community of lovers of mathematical problem solving! There are more than 250 fully-solved problems in the book, containing examples from AIME competitions of the 1980's, 1990's, 2000's, and 2010's. In some cases, multiple solutions are presented to highlight variable approaches. To help problem-solvers with the exercises, the author provides two levels of hints to each exercise in the book, one to help stuck starters get an idea how to begin, and another to provide more guidance in navigating an approach to the solution. The first Dr Stephen Dunbar thriller. When seven-year-old Amanda Chapman is admitted to hospital with acute renal failure, her parents are in despair. Their hope is renewed when Amanda is accepted for treatment in a pioneering, state-of-the-art dialysis unit in an exclusive private hospital in Glasgow, but behind the lavish hospital corridors, private rooms and friendly staff lies something much more sinister. Dr Dunbar goes undercover to find out in the first of Ken McClure's gripping thrillers featuring the ex-Special Forces medic. Dr Steven Dunbar, ex Special Forces medic and chief investigator with the Sci-Med Inspectorate, comes across apparent interference with front-line medical research in the UK. Funding for Professor Dorothy Lindstrom, a leading neuroscientist who has recently returned home to the UK after a tragic fire took the lives of two of her young colleagues at Yale University, has been completely blocked. Professor Lindstrom, a feisty character who has made more than a few enemies over the years, and her research group, who have been making dramatic progress in the new field of epigenetics which deals with genetic influences on human behaviour are upset and angry but feel helpless. One of the group, Dr Owen Barrowman who has been looking for genetic and biochemical differences in convicted psychopathic killers held in secure establishments across the UK is particularly upset as he believes he is on the brink of a major discovery. He is determined to complete his research before the money runs out despite Steven's warning about the dangers of being continually exposed to evil. His warnings go unheeded with tragic consequences. The eighth Dr Stephen Dunbar thriller. John Motram, a cell biologist at Newcastle University, firmly believes that Black Death was not caused by bubonic plague but by an unknown virus. He is excited when Oxford University informs him that there might be preserved bodies of Black Death victims hidden under Dryburgh Abbey. Motram launches an excavation but it comes to a disastrous end when he apparently loses his mind after entering the secret tomb. Dr Steven Dunbar is sent to investigate - fearing that a new killer virus has been let loose. The Governments of the world know a terrorist biological attack will happen sooner rather than later. Vaccination is the only solution, but designing and producing vaccines has never been harder due to stringent trials, rules and regulations and huge settlements in an increasingly litigious society. There is no such thing as a 'completely safe vaccine' but necessity soon begins to outweigh caution and corners are cut, blind eyes turned and scientists given free rein with the new science of molecular biology. The only outcome can be disaster. The ninth Dr Stephen Dunbar thriller. Ex-Special Forces medic Dr Steven Dunbar has left his job with the Sci-Med Inspectorate and now works for a pharmaceutical company. Against his will, he is persuaded to return to Sci-Med when a number of people die in suspicious circumstances, including a former health minister. And then the UK comes under bio-terrorist attack. A disease not seen in the country for a hundred years is let loose on major cities and a group of young Islamic fundamentalists are arrested. But something is not quite right. Steven begins to suspect that there is a dark and ruthless conspiracy at the heart of the outbreak that is much closer to home. Presents current topics in applied mathematics such as singular perturbation, nonlinear wave propagation, bifurcation, similarity methods, and the numerical solution of partial differential equations. It emphasizes the interdependency of mathematics and its application to physical phenomena, and is written in a style accessible to readers with a wide range of interests and backgrounds. There is also coverage of scaling and dimensional analysis, calculus of variations, Fourier and transform methods for partial differential equations, and integral equations. A riveting personal exploration of the healthcare crisis facing inner-city communities, written by an emergency room physician who grew up in the very neighborhood he is now serving Sampson Davis is best known as one of three friends from inner-city Newark who made a pact in high school to become doctors. Their book *The Pact* and their work through the Three Doctors Foundation have inspired countless young men and women to strive for goals they otherwise would not have dreamed they could attain. In this book, Dr. Davis looks at the healthcare crisis in the inner city from a rare perspective: as a doctor who works on the front line of emergency medical care in the community where he grew up, and as a member of that community who has faced the same challenges as the people he treats every day. He also offers invaluable practical advice for those living in such communities, where conditions like asthma, heart disease, stroke, obesity, and AIDS are disproportionately endemic. Dr. Davis's sister, a drug addict, died of AIDS; his brother is now paralyzed and confined to a wheelchair as a result of a bar fight; and he himself did time in juvenile detention—a wake-up call that changed his life. He recounts recognizing a young man who is brought to the E.R. with critical gunshot wounds as someone who was arrested with him when he was a teenager during a robbery gone bad; describes a patient whose case of sickle-cell anemia rouses an ethical dilemma; and explains the difficulty he has convincing his landlord and friend, an older woman, to go to the hospital for much-needed treatment. With empathy and hard-earned wisdom, *Living and Dying in Brick City* presents an urgent picture of medical care in our cities. It is an important resource guide for anyone at risk, anyone close to those at risk, and anyone who cares about the fate of our cities. Praise for *Living and Dying in Brick City* “A pull-no-punches look at health care from a seldom-heard sector . . . *Living and Dying* isn't a sky-is-falling chronicle. It's a real, gutsy view of a city hospital.”—Essence “Gripping . . . a prescription to help kids dream bigger than their circumstances, from someone who really knows.”—People “[Dr. Davis] is really a local hero. His story has inspired so many of our young people, and he's got his finger on the pulse of what is a challenge in Newark, and frankly all across America. . . . I think his book is going to make a big impact.”—Cory Booker “Some memoirs are heartfelt, some are informative and some are even important. Few, however, are all three. . . . As rare as it is for a book to be heartfelt, well written and inspirational, it's even rarer for a critic to say that a book should be required reading. This ought to be included in high school curricula—for the kids in the suburbs who have no idea what life is like in the inner cities, and for the kids in the inner cities to know that there is a way out.”—The Star-Ledger “Dramatic and powerful.”—New York Daily News “This book just might save your life. Sampson Davis shares fascinating stories from the E.R. and addresses the inner-city health crisis. His book is an important investment in your most valuable resource: your health.”—Suze Orman, author of *The Money Class* Schweigen ist halt doch nicht immer Gold: Ben erhält als Geschenk einen kleinen Pinguin. Er begrüsst ihn herzlich und will mit ihm Spielen, doch der Pinguin antwortet auf keine seiner Fragen. Ben versucht, ihn mit allen Mitteln zum Reden zu bringen, aber nichts fruchtet, der Pinguin schweigt eisern. Schliesslich versucht Ben, ihn an den Löwen zu verfüttern, was dieser verweigert, dafür frisst er Ben. Das löst dann endlich die gewünschte Reaktion des Pinguins aus und alles wird gut. Sehr ausdrucksstarke, aufs Minimum reduzierte Bilder, die die witzige Geschichte über verfehlte Kommunikation liebevoll illustrieren, vervollständigen das Buch. Ab 5 Jahren, *****, Monika Hedinger. The third Dr Stephen Dunbar thriller. When a traveller dies on a flight back to London from Africa, Ebola virus seems to be the reason. However, other victims in the UK are dying of the same illness and there seems to be no link. As politicians equivocate and scientists attempt to find a cause, Dr Steven Dunbar begins to question his own belief in medicine. Determined to help her amnesiac patients recover their lives, Boston psychiatrist Cristina Silva is achieving near-miraculous results by prescribing Recognate, a revolutionary new memory-recovery drug now in trials. She understands her patients' suffering better than most, because she's lost her memories, too. Desperate to become herself again, she pops the same experimental drug she prescribes to her patients. And, like them, she remembers a little more each day. Until one of her patients, a successful accountant, jumps from an eight-story window to his death. And as Cristina's memories return, with them come violent visions and an incessant voice in her head. Maybe the drug isn't safe after all. But discontinuing it would mean forgetting everything she's recalled and losing herself. Then an enigmatic, possibly dangerous man appears at Cristina's bus stop. He seems to know more about her life than she does and says she holds a secret that puts her life in danger. Perilously balanced between an unknown past and a terrifying future, if she wants to survive, Cristina must stay on the medication and unlock those memories before it's too late—even if the adverse effects of the drug could destroy her. Die volle Ladung Leben - ein Klassiker der Underground-Literatur Mietskasernen, Arbeitslosigkeit, miese Pubs, viel Alkohol und jede Menge Drogen: das ist der Alltag in Leith, einem heruntergekommenen Vorort von Edinburgh. Das ist auch der Alltag von Renton, Spud, Begbie, Sick Boy und Dianne, einer Clique von jugendlichen Außenseitern, in deren Leben sich fast alles um Drogen dreht. Wer kein Junkie ist, wird bald einer werden oder war einer oder wird bald wieder einer sein. Neben Stoff, Rausch, Entzug, Sex, Frust und Gewalt gibt es aber auch noch die Musik. Und wenn diese Anti-Helden schon alle den Blues haben, so doch zumindest mit 160 beats per minute. Najpierw gor?czka, potem krwotok, a wszystko ko?czy si? ?mierci? w ci?gu kilku godzin. Co jest ?ród?em zaka?enia i kto b?dzie nast?pn? ofiar? nieznanego wirusa? Doktor Steven Dunbar z Inspektoratu Sci-Med dostaje kolejne zlecenie, tym razem ma wyja?ni?, na co zmar? wracaj?cy z Afryki podró?nik i gdzie pozosta?e ofiary zarazi?y si? gor?czk? krwotoczna? podobn? do Eboli. Detektyw medyczny znajduje wspólny mianownik dla wszystkich zaka?e?, ale wyniki ?ledztwa przekraczaj? ludzk? wyobra?ni?. „Joker” to trzeci z thrillerów o ?ledztwach dra Dunbara, mo?na go uzna? za oddzieln? histori? lub czyta? bez zachowania kolejno?ci serii. Je?li lubisz przyprawiaj?ce o dreszcze thrillery medyczne i pasjonuj? ci? powie?ci w stylu Robina Cooka, przeczytasz „Jokera” z du?ym zainteresowaniem. Dr Dunbar - seria nagradzanych thrillerów z udziałem Stevena Dunbara, by?ego lekarza i cz?onka jednostek specjalnych Inspektoratu Sci-Med. Bohater powie?ci Kena McClure'a wykorzystuje swoj? wiedz? medyczn? do wykrywania wykrocze? i przest?pstw z dziedziny szeroko poj?tej medycyny (przedmiotem jego ?ledztw s? m.in. b??dy w sztuce lekarskiej, handel nark?dami ludzkimi, szczepionki ska?one genetycznie). Cykl powie?ci o doktorze Dunbarze to trzymaj?ce w napi?ciu thrillery, z przera?aj?co wiarygodnymi dla naukowców przewidywaniami medycznymi. Ken McClure, w?a?c. Begg (ur. 1942 r. w Edynburgu) szkocki mikrobiolog, wybitny lekarz i naukowiec, uznawany obecnie za najlepszego brytyjskiego autora t?umaczonych na 25 j?zyków thrillerów medycznych. Pisarz zadebiutowa? w 1985 r. powie?ci? Kryptonim „Kowad?o”, kolejne utwory przynios?y mu mi?dzynarodow? s?aw? - krytycy literatury

ch?tnie nazywaj? go szkockim Michaelem Crichtonem i przyrównuj? do Robina Cooka, mistrza thrillerów medycznych. Czy trzeba ba? si? kolejnej pandemii i szczepi? si? przed nowym wariantem „hiszpanki”, która w 1918 r. zabi?a 40 mln. ludzi? Kiedy w laboratorium trwaj? prace nad szczepionk? przeciwko grypie, znieznacka wpada tam banda „ekologów”, która bestialsko morduje jednego z zatrudnionych w nim naukowców. Dr Steven Dunbar próbuje ustali? przyczyny zabójstwa w tajnym instytucie i wyja?ni?, co tak naprawd? tam planowano. Gdy w jego otoczeniu gin? kolejni ludzie, hipoteza o pracach nad rekonstrukcj? szczepu „hiszpanki” staje si? coraz bardziej prawdopodobna. „Szczepionka” to szósty z thrillerów o ?ledztwach dra Dunbara, mo?na go uzna? za oddzieln? histori? lub czyta? bez zachowania kolejno?ci serii. Je?li lubisz mro??ce krew w ?y?ach intrygi w thrillerach medycznych i pasjonuje ci? tematyka broni biologicznej, „Szczepionka ?mierci” na pewno trafi w twój gust czytelniczy. Dr Dunbar - seria nagradzanych thrillerów z udzia?em Stevena Dunbara, by?ego lekarza i cz?onka jednostek specjalnych Inspektoratu Sci-Med. This book is for all readers of crime fiction. Dividing Britain and Ireland into thirteen regions, the author describes the work of contemporary and historic crime writers and their novels where the setting of the novel is crucial, giving the story context and local relevance. Ex-Special Forces Medic, Dr Steven Dunbar of the Sci-Med Inspectorate, is asked to investigate the suspicious death of an English university lecturer. Sci-Med's concern is that the man once worked at Porton Down, the UK's Defence Research establishment and there is a fear that there might be a link. Steven is drawn into a web of deceit, intrigue and cover-up at the highest government level leading to his becoming entangled in the controversy surrounding Gulf War Syndrome and the true origin of the disease. This title was first published by Allison & Busby in the UK in 2004. It is the fourth Dr Steven Dunbar thriller. Ken McClure is the internationally bestselling author of over twenty medical thrillers such as The Lazarus Strain, Past Lives, White Death and Dust to Dust. His books have been translated into twenty-five languages and he has earned a reputation for the accuracy of his predictions. McClure's work is informed by his background as an award-winning research scientist with the UK's Medical Research Council. When a traveller dies on a flight back to London from Africa, Ebola virus seems to be the reason. However, other victims in the UK are dying of the same illness and there seems to be no link. As politicians equivocate and scientists attempt to find a cause, Dr Steven Dunbar begins to question his own belief in medicine. McClure is a worth rival to Andy McNab and Michael Crichton
