Flood inundation models enable us to make hazard predictions for floodplains, mitigating increasing flood fatalities and losses. This book provides an understanding of hydraulic

modelling and floodplain dynamics, with a key focus on state-of-the-art remote sensing data, and methods to estimate and communicate uncertainty. Academic researchers in the fields of hydrology, climate change, environmental science and natural hazards, and professionals and policy-makers working in flood risk mitigation, hydraulic engineering and remote sensing will find this an invaluable resource. This volume is the third in a collection of four books on flood disaster management theory and practice within the context of anthropogenic climate change. The others are: *Floods in a Changing Climate: Extreme Precipitation* by Ramesh Teegavarapu, *Floods in a Changing Climate: Hydrological Modeling* by P. P. Mujumdar and D. Nagesh Kumar and *Floods in a Changing Climate: Risk Management* by Slodoban Simonović. A distinguished mathematician traces the history of science, illustrating philosophy's ongoing role, explaining technology's erosion of the rapport between the

two fields, and offering suggestions for their reunion. 1962 edition. Vols. for include reports for the National Research Council; 1965/66- include reports for the National Academy of Engineering; 1971/72- include reports for the Institute of Medicine. II. Men, Women, Gender Wars III. Narcissists, Psychopaths, and Other Predators IV. Sex and Intimacy: Forgotten Arts VI. Me, Me, and Me VII. Public Intellect, Private Rants Fascinating, engaging, and extremely visual, *Foundations of Astronomy* Twelfth Edition emphasizes the scientific method throughout as it guides students to answer two fundamental questions: What are we? And how do we know? Updated with the newest developments and latest discoveries in the exciting study of astronomy, authors Michael Seeds and Dana Backman discuss the interplay between evidence and hypothesis, while providing not only fact but also a conceptual framework for understanding the logic of science. Important Notice: Media content

referenced within the product description or the product text may not be available in the ebook version. This updated edition on evaluating the effectiveness of school programs provides an expanded needs-assessment section, additional methods for data analysis, and tools for communicating program results. Intermediate Statistics: A Conceptual Course is a student-friendly text for advanced undergraduate and graduate courses. It begins with an introductory chapter that reviews descriptive and inferential statistics in plain language, avoiding extensive emphasis on complex formulas. The remainder of the text covers 13 different statistical topics ranging from descriptive statistics to advanced multiple regression analysis and path analysis. Each chapter contains a description of the logic of each set of statistical tests or procedures and then introduces students to a series of data sets using SPSS, with screen captures and detailed step-by-step instructions. Students acquire an appreciation of the logic of descriptive and

inferential statistics, and an understanding of which techniques are best suited to which kinds of data or research questions. The ancient Chinese were profoundly influenced by the Sun, Moon and stars, making persistent efforts to mirror astral phenomena in shaping their civilization. In this pioneering text, David W. Pankenier introduces readers to a seriously understudied field, illustrating how astronomy shaped the culture of China from the very beginning and how it influenced areas as disparate as art, architecture, calendrical science, myth, technology, and political and military decision-making. As elsewhere in the ancient world, there was no positive distinction between astronomy and astrology in ancient China, and so astrology, or more precisely, astral omenology, is a principal focus of the book. Drawing on a broad range of sources, including archaeological discoveries, classical texts, inscriptions and paleography, this thought-provoking book documents the role of

astronomical phenomena in the development of the 'Celestial Empire' from the late Neolithic through the late imperial period. Schottland, 1863: Die verzweifelte, 15-jährige Irin Bessy findet Arbeit als Dienstmädchen bei einer freundlichen, aber seltsamen jungen Frau und findet heraus, dass ihre Vorgängerin vor kurzem ums Leben gekommen ist. Observation of young children, their development, and planning for next steps is a fundamental requirement of early years practice. Awareness of appropriate techniques, understanding what you are observing, as well as what it all means in terms of planning for learning is an essential yet difficult skill to acquire. This is a very practical book on observing young children that supports you in preparing a child observation case study. Taking a step-by-step approach the book covers the whole process beginning with choosing a child to study before discussing the fundamentals of child observation. It includes invaluable guidance on: The ethics of your study

Appropriate techniques and tools for gathering data Observations that are useful How to select material to include Analyzing or interpreting the information Potential pitfalls The book includes many examples of good observations, which help show how your own observations can be evaluated, analyzed and used. In addition there is a fully worked example of a child observation case study in the penultimate chapter. If you are studying early years or early childhood studies at foundation, undergraduate or Master's degree level then this book will really help you get to grips with how a good child observation study unfolds and develops. Cath Arnold works at the Pen Green Centre, an internationally renowned Children's Centre in Corby, UK. She is author of *Observing Harry* (Open University Press 2003). This is a fascinating and accessible new book on child observation case study for students and professionals. Cath Arnold integrates theoretical perspectives and practical examples of observations with remarkable clarity in this

comprehensive guidance to child case study. Shirley Allen, Senior Lecturer Early Childhood Studies, Middlesex University It is quickly evident to the reader that 'Doing Your Child Observation Case Study' is steeped in the expertise and extensive experience of its author. The practical guidance it offers is likely to prove invaluable for childhood studies students and early career researchers in the field. Yet Cath Arnold's 'step-by-step guide' goes far beyond the practical. She shines vital light on the complex nuances of values, beliefs, ethics and rights inherent in child case study and addresses with clarity and credibility the crucial role that theory can play in supporting our understanding of children's actions. This text is an excellent addition to the childhood studies bookshelf. Dr Jane Murray, Centre for Education and Research, University of Northampton, UK Cath Arnold has provided a rich resource for those who want to understand more about children, their wellbeing and their learning. This detailed

approach to child observation offers guidance on why, how and what to observe, and how to interpret what is observed. Rich in examples collected over many years 'Doing your Child Observation Case Study' will get many early years practitioners started on their own learning journeys as they watch and engage with young children to develop detailed impressions of children's development. Professor Cathy Nutbrown, Head of The School of Education, The University of Sheffield In this new book Cath is once more supporting early childhood educators to engage in the strong UK tradition of child observations; the tradition of Piaget, Novara, Darwin and Susan Isaacs. She has developed her own understanding of the importance of observational studies building on the giants whose shoulders we all stand on. This powerful publication combines insights into both the theory and practice of developing child observations in an early years setting. Cath demonstrates how detailed and powerful records

of children's learning and development speak to practitioners and hold their value over time in a world where early educators are increasingly obliged to devote enormous amounts of their energy filling in forms, schedules and are hard pressed to reject the pressure of tick box developmental checks and imposed tracking schemes. This book lights the way to a much deeper way of documenting children's learning and development. As educators we need to match children's learning with rich curriculum

content and this book reminds us that we can only achieve this critical pedagogical task if we have closely watched what it is that excites and interests each individual child. 'Doing Your Child Observation Case Study' shows us the way to be well informed practitioners able to offer children a really rich learning experience. Dr. Margy Whalley, Director of the Research, Development and Training Base at the Pen Green Centre and Centre for Children and their Families app.instamber.com
