Written for all levels of Microsoft Office 365 users, *Mastering VBA Microsoft Office 365: 2019 Edition* explains how to customize and automate the Office suite of applications. This book teaches the reader how to begin using

Visual Basic code to write and execute customized macros in Microsoft Excel. Topics include: variables, worksheets, spreadsheet files, cell formulas, relative referencing, copying and pasting, finding cells with data, setting up a range for cell referencing, pivot tables, cell formatting, and much more. The intention is to teach the reader how to perform regular tasks in Excel using Visual Basic code instead of the regular manual method. This will allow the reader to perform their work thousands of times faster with no effort once they have finished writing their macro. All of the code in this book will be available for download from the Internet

at: <https://sites.google.com/view/questions-with-solutions/excel-vba-macro-code>. The code that has been provided in this book has been written as generically as possible in order to allow it to be used with minimal modification. It is not necessary for the user to memorize code, but it is very useful for the user to build a library of snippets which they tend to use most frequently and to become very familiar with their most commonly used macro code. This book also provides an opportunity to put this new code to work in the form of an assignment which involves writing a full macro. Details and instructions are provided, and the full solution

is provided as well. The question on everyone's mind will be, what is the future of Excel and VBA macros in this fast-changing world of technology? Well, rest assured that Excel VBA macros will be here until you are retired. Microsoft is aware that there are millions of organizations out there that depend on millions of macros made via Excel. They might have changed to other languages but those VBA macros will work for them no matter, for many decades to come on the PC and the Mac. The reason for this confidence is that Microsoft still supports Excel 4 macros after 20 years since they became functionally outdated.

Excel 4 comes with a primitive macro language which was introduced in August 1992 but was taken out of action by VBA in the next version Excel 5 in June 1994. Excel 4 was not used by many people for programming because it was not very user-friendly. But those programs still ran in Excel 2016 as Microsoft knew that many companies still depended on them. Microsoft has now decided that VBA is not to be extended to a platform that already does not have it. Therefore there will not be any macros for the iPhone, iPad or Android devices. Rather they are developing a macro language which is based on JavaScript and it is to be

extended to Windows, Mac, Android, iOS and Excel Online. You may start building macros by using JavaScript even now but it will not be fun as they still do not have a macro recorder, objects, methods, and properties. It is still incomplete and evolving with a syntax that is not user-friendly and less readable than VBA. Another problem is that JavaScript does not support 2D arrays. You need to use arrays of arrays instead. This language runs asynchronously, therefore, you will have to design the code yourself. And it is slow but, if you are looking for a macro to run on the iPad, this is the path to take going forward. Grab this book today and enrich your
