The book is all about the automata, formal language theory and computability. Automata theory plays important roles in compilers, text processing, programming languages, hardware designs and artificial intelligence and is the core base of computer science studies. The intent is to make automata theory interesting and challenging and break the myth of being a tough topic. For that matter, topics are covered in an easy to understand manner with the help of elaborative and well described examples. For topics which are little complex and fuzzy to understand, strategy adopted is to connect the topic with the everyday problems we encounter, in

order to develop a connective understanding of the topic and get a clear view of the topic. Exercise questions are provided with the answers to understand the solution easily. The prospective audience for the book are computer science engineering students. Computer science scholars and people preparing for competitive exams like GATE, UGC-NET, etc. In an easy to use dictionary style of A–Z presentation, this volume lists the taxonomy and medicinal usage of Indian plants. The Frank Maria papers, all 100 linear feet of it which I first saw with amazement at his Pumpkin Hill residence in 2002, is literally a treasure trove of historical information on the Arab American experience of the mid-late 20th Century. It reflects the energetic life of someone who was passionately devoted to increasing understanding about the Arab world and promoting peace and stability in that part of the world and beyond. As one of the nation's leading spokespersons from an Arab American perspective and as an activist in numerous organizations, Maria's papers contain some of the richest documentation available anywhere for studying the dynamic evolution of the Arab American community. It is a privilege, on behalf of the Immigration History Research Center, to serve as stewards of this exceptional resource material.
