Flying to a faraway destination can be wondrous and frightening. When settling down for a long flight, a range of questions may come to mind about some of the unusual aspects of flying. Why is it so important that you are sealed into the aircraft cabin? Surely letting in a little fresh air or stretching your legs out on the wing would make a long flight a little more pleasant. Should you be concerned about the lightning storm in the distance? Why do you feel like a zombie after crossing several time zones? These and many more questions are explored in an easy to read and humorous way. In answering these questions you will be taken on a journey through a range of aviation topics with great care and insight. You will see why the human body is not well adapted to some aspects of flying. These range from issues with low oxygen, low air pressure, g-forces, and radiation levels. You will see why your flight needs to steer clear of a range of hazardous weather conditions. From thunderstorms throwing out massive hailstones, to freezing conditions in the clouds, which are trying to turn the aircraft into an ice block. Gegen den Big-Other-Kapitalismus ist Big Brother harmlos. Die Menschheit steht am Scheideweg, sagt die Harvard-Ökonomin Shoshana Zuboff. Bekommt die Politik die wachsende Macht der High-Tech-Giganten in den Griff? Oder überlassen wir uns der verborgenen Logik des Überwachungskapitalismus? Wie reagieren wir auf die neuen Methoden der Verhaltensauswertung und -manipulation, die unsere Autonomie bedrohen? Akzeptieren wir die neuen Formen sozialer Ungleichheit? Ist Widerstand ohnehin zwecklos? Zuboff bewertet die soziale, politische, ökonomische und technologische Bedeutung der großen Veränderung, die wir erleben. Sie zeichnet ein unmissverständliches Bild der neuen Märkte, auf denen Menschen nur noch Quelle eines kostenlosen Rohstoffs sind - Lieferanten von Verhaltensdaten. Noch haben wir es in der Hand, wie das nächste Kapitel des Kapitalismus aussehen wird. Meistern wir das Digitale oder sind wir seine Sklaven? Es ist unsere Entscheidung! Zuboffs Buch liefert eine neue Erzählung des Kapitalismus. An ihrer Deutung kommen kritische Geister nicht vorbei. The fire at the Triangle Waist Company in New York City, which claimed the lives of 146 young immigrant workers, is one of the worst disasters since the beginning of the Industrial Revolution, and the disaster, which brought attention to the labor movement in America, is part of the curriculum in classrooms throughout the country. Told from alternating points of view, this historical novel draws upon the experiences of three very different young women: Bella, who has just emigrated from Italy and doesn't speak a word of English; Yetta, a Russian immigrant and crusader for labor rights; and Jane, the daughter of a wealthy businessman. Bella and Yetta work together at the Triangle Shirtwaist Factory under terrible conditions--their pay is docked for even the slightest mistake, the bosses turn the clocks back so closing time is delayed, and they are locked into the factory all day, only to be frisked before they leave at night to make sure they haven't stolen any shirtwaists. When the situation worsens, Yetta leads the factory's effort to strike, and she meets Jane on the picket line. Jane, who feels trapped by the limits of her own sheltered existence, joins a group of high-society women who have taken an interest in the strike as a way of supporting women's suffrage. Through a series of twists and turns, the three girls become fast friends--and all of them are in the Triangle Shirtwaist Factory on

March 25, 1911, the day of the fateful fire. In a novel that puts a human face on the tragedy, Margaret Peterson Haddix has created a sweeping, forceful tale that will have readers guessing until the last page who--if anyone--survives. Few books on Ordinary Differential Equations (ODEs) have the elegant geometric insight of this one, which puts emphasis on the qualitative and geometric properties of ODEs and their solutions, rather than on routine presentation of algorithms. From the reviews: "Professor Arnold has expanded his classic book to include new material on exponential growth, predator-prey, the pendulum, impulse response, symmetry groups and group actions, perturbation and bifurcation." --SIAM REVIEW

Abelian varieties with complex multiplication lie at the origins of class field theory, and they play a central role in the contemporary theory of Shimura varieties. They are special in characteristic 0 and ubiquitous over finite fields. This book explores the relationship between such abelian varieties over finite fields and over arithmetically interesting fields of characteristic 0 via the study of several natural CM lifting problems which had previously been solved only in special cases. In addition to giving complete solutions to such questions, the authors provide numerous examples to illustrate the general theory and present a detailed treatment of many fundamental results and concepts in the arithmetic of abelian varieties, such as the Main Theorem of Complex Multiplication and its generalizations, the finer aspects of Tate's work on abelian varieties over finite fields, and deformation theory. This book provides an ideal illustration of how modern techniques in arithmetic geometry (such as descent theory, crystalline methods, and group schemes) can be fruitfully combined with class field theory to answer concrete questions about abelian varieties. It will be a useful reference for researchers and advanced graduate students at the interface of number theory and algebraic geometry.
